# Chapter 1 - Product Overview

## Features

---

### **Supports IEEE802.11n and IEEE802.11b/g**

With support for Wireless-N, Wireless-G, and Wireless-B standards, the AirStation can transfer data to and from all standard 2.4 GHz wireless clients.

### **Supports WDS**

WDS bridging allows multiple units to operate in a bridged network for extended coverage.

### **Dual speed mode**

Dual speed mode makes wireless transmission faster by using 2 channels, allowing 300 Mbps data transmission.

### **Support AOSS and WPS**

Both AOSS (AirStation One-touch Secure System) and WPS (Wi-Fi Protected Setup) are supported. These automatic connection standards make connection with compatible wireless devices easier.

### **Security Features**

The AirStation is equipped with the following security features:

- AOSS
- WPS
- WPA-PSK (AES)
- WPA2-PSK(AES)
- WPA/WPA2 mixed PSK
- WEP(128/64 bit)
- Privacy Separator
- MAC address access restriction
- Deny Any Connection/SSID stealth
- Web configuration interface with password
- Firewall with easy rules

### **Automatic Channel Selection**

Monitors wireless interference and automatically assigns the clearest, best channel.

### **Initialization**

To restore settings back to the factory defaults, hold down the Reset button on the bottom of the unit.

### **Browser Based Administration**

This unit can be easily configured from a web browser on your computer.

## **300 Mbps High Speed Mode**

---

300 Mbps is the link speed of WCR-G300 / WCR-HP-G300 when using Wireless-N mode. It represents actual wireless data speeds, including overhead. Because the overhead is not available for user data transfer, usable wireless throughput will be substantially slower.

# Package Contents

# Hardware Overview

---

## Front Panel LED's

### 1 Power LED (Green)

On: The AC adapter is connected  
Off: The AC adapter is not connected

### 2 Security LED (Amber)

Indicates security status.

Off: Encryption is not set

On: Encryption has been set

Double blink: The unit is waiting for an AOSS or WPS security key

Blinking: AOSS or WPS error; failed to exchange security keys

Note: When the Security LED is lit, an encryption key has been set. Wireless clients will need the same key to connect.

### 3 Wireless LED (Green)

Indicates wireless LAN status.

Blinking: Wireless LAN is transmitting

On: Wireless LAN is connected but not active

### 4 Router LED (Green)

On: Router functionality is enabled

Off: Router functionality is disabled

**5 Diag LED (Red)**

This indicates the status of the unit depending on the number of blinks per cycle.

Note: When the unit is first turned on or restarted, the Diag LED will blink for almost a minute during boot. This is normal.

Diag LED status	Meaning	Status
2 blinks <sup>*1</sup>	Flash ROM error	Cannot read or write to the flash memory.
3 blinks <sup>*1</sup>	Ethernet (wired) LAN error	Ethernet LAN controller is malfunctioning.
4 blinks <sup>*1</sup>	Wireless LAN error	Wireless LAN controller is malfunctioning.
5 blinks	IP address setting error	Because the network addresses of both the Internet port (INTERNET port) and the LAN port are the same, it is not possible to establish communication. Change the LAN side IP address of this unit.
Continuously blinking <sup>*2</sup>	Updating the firmware Saving settings Initializing settings	Updating the firmware. Saving the settings. Initializing the settings.

<sup>\*1</sup> Unplug the AC adapter from the wall socket, wait for a few seconds, and then plug it again. If the Diag LED still flashes, please contact technical support.

<sup>\*2</sup> Never unplug the AC adapter while the Diag LED is blinking continuously.

## Back Panel

### 6 Antenna connectors

The WCR-G300N has fixed antennas here.

For the WCR-HP-G300, screw on the included antennas here.

### 7 DC Connector

Connect the included AC adapter here.

### 8 Internet Port

10 Mbps and 100 Mbps connections are supported.

Note: In bridge / AP mode, the Internet port becomes a regular LAN port, for a total of 5 usable LAN ports.

### 9 LAN Port

Connect your computer, hub, or other Ethernet devices to these ports.

This switching hub supports 10 Mbps and 100 Mbps connections.

## Right Side

### 10 AOSS/WPS Button

To initiate AOSS or WPS, hold down this button until the Security LED flashes (about 1 second). Then, push or click the AOSS or WPS button on your wireless client device to complete the connection. Both devices must be powered on for this to work.

### 11 Reset Button

With the power on, hold down this button until the Diag LED comes on to initialize the AirStation's settings to their default values.

## Bottom

### 12 Factory Default Settings

This sticker shows the AirStation's SSID, MAC address, and WPS PIN code.

# Chapter 2 - Installation

## Antenna Placement

---

The antennas are included in the package. Screw the antennas on clockwise to install.

## Initial Setup

---

To configure your AirStation, follow the procedure below.

- 1** Turn off your computer and modem. If the modem doesn't have an off switch, unplug its power connector.
- 2** Find the LAN cable that connects your computer and modem. Unplug it from the computer.
- 3** Plug the LAN cable from the modem into the Internet (WAN) port of your AirStation. Turn on the modem.
- 4** Connect your computer to one of the AirStation's LAN ports with the Ethernet cable. Turn on the AirStation, wait one minute, and then turn on your computer.
- 5** Confirm the devices are connected correctly.
- 6** Wait for a minute or so, until the AirStation's LEDs are lit as described below:

Power	Green LED on
Wireless	Green LED on
Router	Green LED on
Diag	Off

※ Refer to pages 8 and 10 for LED locations and other details.

- 7** Launch a web browser. If the [home] setup screen is displayed, setup is complete. If a username and password screen are displayed, enter “admin” (in lower case) for the username, leave the password blank, and click [OK]. Follow the instructions on the screen to complete setup.

You’ve completed initial setup of your AirStation. Refer to Chapter 3 for advanced settings.

## WDS Setup

---

To configure the WDS, follow the procedure below.

- 1** Change your computer’s IP to a fixed address. For details, please refer to Appendix D (page 96).

ex) IP address	192.168.11.80
Subnet mask	255.255.255.0
Default gateway	blank
Preferred DNS server	blank
Alternate DNS server	blank

- 2** Turn off your computer.
- 3** Connect your computer to one of the AirStation’s LAN ports with the Ethernet cable. Turn on the AirStation, wait one minute, and then turn on your computer.
- 4** Wait for about a minute, until the AirStation’s LEDs are lit as described below:

Power	Green LED on
Wireless	Green LED on
Router	Green LED on
Diag	Off

※ Refer to pages 8 and 10 for LED locations and other details.

- 5 Open the web configuration interface (page 71).
- 6 In the [Mode information] menu, select [Bridge Mode], then click [Apply].

When this below screen appears, re-enter "admin" for the username and "password" for the password and click [OK].

- 8 The web configuration interface will open. Click [Wireless Config] , then [WDS].
- 9 Check [Use].
- 10 Follow the directions below.

### AOSS / WPS Settings

Under *Connection type*, select *AOSS* or *WPS* and click the AOSS or WPS button. Also push the AOSS or WPS button on the client device that you are connecting to the network. Automatic configuration will take about a minute. To return the unit to its original IP address settings, refer to Appendix D.

WDS	<input checked="" type="checkbox"/> Use
Connection Type	AOSS
Connection status	Manual AOSS WPS
<input type="button" value="Apply"/>	

Start AOSS connection by WDS mode.

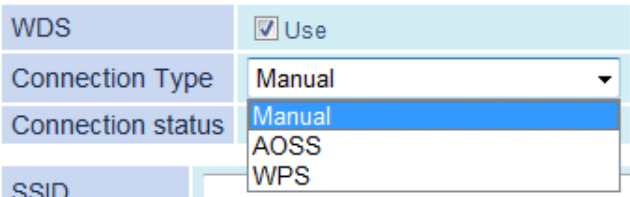

WDS	<input checked="" type="checkbox"/> Use
Connection Type	WPS
Connection status	Manual AOSS WPS

Start WPS connection by WDS mode

**Manual Settings**

Select [Manual] from the *Connection Type* dropbox.

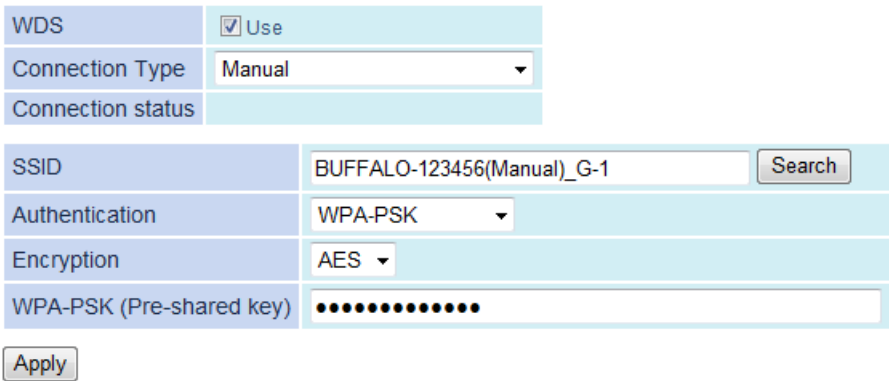

- 11** A list of available wireless APs will be generated. Select the target AP and click [Select]. Click [Search again] if no APs are found.

Select **AirStation (Master)** to connect to.

Select	BSSID	SSID	Wireless ch	Signal	Encryption	Wireless mode
<input checked="" type="radio"/>	0024A5C000D8	BUFFALO-123456(Manual)_G-1	1	Excellent	YES	n/g/b
<input type="radio"/>	001D73640035	001D73640035_G	11	Bad	YES	n/g/b

- 12** Configure the security settings to match that of the target AP, then click [Apply].

- 13** Revert your computer's IP adress settings to their original values as described in Appendix D (page 96).

ex) IP address	obtain an IP address automatically
Subnet mask	obtain DNS server address automatically

WDS setup is complete. Refer to Chapter 4 for advanced settings.

# Chapter 3 - Configuration

To access the AirStation's advanced settings, use the web-based configuration interface.

## Accessing the Web-based Configuration Interface

---

Follow the procedure below to open the web-based configuration interface.

**1** Launch a web browser.

**2** Enter the router's LAN-side IP address in the address field and press the [Enter] key.

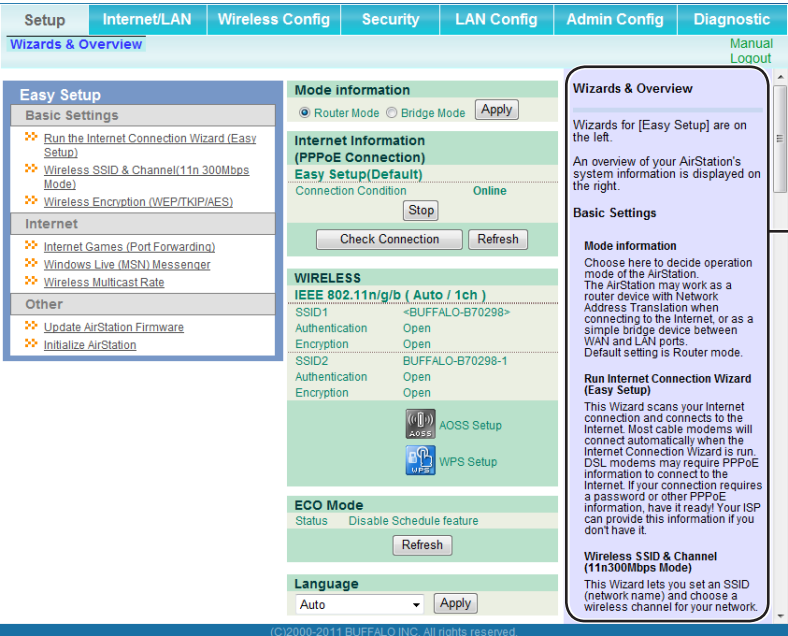

Notes: The AirStation's default LAN-side IP address depends on its mode setting.  
In router mode: 192.168.11.1  
In bridge mode: 192.168.11.100  
If you changed the IP address setting, then use the new IP address.

**3** Enter "admin" for the username and "password" for the password and click [OK].

Note: If you forget your password, hold down the Reset button (page 11) to initialize all settings. The password will then be blank.  
Note that all other settings will also revert to their default values.

4

The configuration interface is displayed.

Help is always displayed on the right side of the configuration interface. Refer to the Help screens for more information on each page.

## Configuration Menu (Router Mode)

The menu structure for the AirStation in router mode is the following. Please refer to the pages listed at right for explanations of each item.

Main screen	Descriptions	Page
Internet/LAN		
Internet	Configure Internet side port and settings	Page 24
PPPoE	PPPoE settings (DSL login)	Page 25
DDNS	DNS settings	Page 27
LAN	LAN side port and DHCP server configuration	Page 29
DHCP Lease	DHCP lease settings	Page 31
NAT	Network address translation settings, used to connect LAN side devices to the Internet	Page 32
Route	Configure the IP communication route that the AirStation uses	Page 33
Wireless Config		
WPS	WPS settings and status	Page 34
AOSS	AOSS (AirStation One-touch Secure System) settings and status	Page 35
Basic	Configure basic wireless settings	Page 37
Advanced	Configure advanced wireless settings	Page 40
WMM	Set priorities for Wireless Multimedia Extensions (Wi-Fi Multimedia)	Page 41
MAC Filter	Limit access to specific devices	Page 43
Security		
Firewall	Protect your computer from outside intruders	Page 46
IP Filter	Edit IP filters which relates to the packets passing through the LAN side and the Internet side	Page 48
VPN Pass-through	Configure IPv6 passthrough, PPPoE passthrough, and PPTP passthrough	Page 49

# Setup

The home page of the configuration interface. You can verify settings and the status of the AirStation here.

The screenshot displays the Buffalo AirStation configuration web interface. At the top, there is a navigation bar with tabs: Setup, Internet/LAN, Wireless Config, Security, LAN Config, Admin Config, and Diagnostic. Below the navigation bar, the 'Setup' tab is active, showing a 'Wizards & Overview' section on the right and a main configuration area on the left.

**Easy Setup**

- Basic Settings
  - Run the Internet Connection Wizard (Easy Setup)
  - Wireless SSID & Channel (11n 300Mbps Mode)
  - Wireless Encryption (WEP/TKIP/AES)
- Internet
  - Internet Games (Port Forwarding)
  - Windows Live (MSN) Messenger
  - Wireless Multicast Rate
- Other
  - Update AirStation Firmware
  - Initialize AirStation

**Wizards & Overview**

Wizards for [Easy Setup] are on the left.

An overview of your AirStation's system information is displayed on the right.

**Basic Settings**

**Mode information**

Choose here to decide operation mode of the AirStation. The AirStation may work as a router device with Network Address Translation when connecting to the Internet, or as a simple bridge device between WAN and LAN ports. Default setting is Router mode.

**Run Internet Connection Wizard (Easy Setup)**

This Wizard scans your Internet connection and connects to the Internet. Most cable modems will connect automatically when the Internet Connection Wizard is run. DSL modems may require PPPoE information to connect to the Internet. If your connection requires a password or other PPPoE information, have it ready! Your ISP can provide this information if you don't have it.

**Wireless SSID & Channel (11n300Mbps Mode)**

This Wizard lets you set an SSID (network name) and choose a wireless channel for your network.

(C)2000-2011 BUFFALO INC. All rights reserved.

## Parameter

## Meaning

Internet/LAN (LAN Config)	Click to display the settings page for WAN and LAN ports.
Wireless Config	Click to display the wireless settings page.
Security	Click to display the security settings page.
LAN Config	Click to display the settings page to open ports for games and applications.
Router mode only	

Parameter	Meaning
Admin Config	Click to display the administrative settings page.
Diagnostic	Click to display the status of the AirStation.
Easy Setup	Easy Setup lets you easily configure AirStation settings like encryption type or wireless channel.
Mode information	Switches between router mode and bridge mode.
Internet Information Router mode only	Displays the current information where the AirStation is connected on the Internet side.
Check Connection Router mode only	Click to check if the AirStation is connected to the Internet properly.
Refresh Router mode only	Click to refresh the current screen.
Wireless	Displays the current wireless settings.
AOSS	Click to display the AOSS configuration interface.
WPS	Click to display the WPS configuration interface.
ECO Mode	Displays the operating status of ECO Mode.
Language	Enable you to select the language you use. If <i>Auto</i> is selected, the same language displayed in the browser will be selected automatically.
Manual	If the AirStation is connected to the Internet, clicking this link opens a web page for downloading the AirStation User Manual.
Logout	Logs out of the AirStation's configuration interface. If the web configuration interface is not used for 5 minutes, it will log out automatically.

# Internet/LAN (LAN Config)

## Internet (Router Mode only)

Configure the Internet (WAN) port here.

Setup	Internet/LAN	Wireless Config	Security	LAN Config	Admin Config	Diagnostic
<a href="#">Internet</a>	<a href="#">PPPoE</a>	<a href="#">DDNS</a>	<a href="#">LAN</a>	<a href="#">DHCP Lease</a>	<a href="#">NAT</a>	<a href="#">Route</a>

Manual

Method of Acquiring IP Address

☒ Perform Easy Setup (Internet Connection Wizard)  
☐ Acquire an IP Address Automatically from a DHCP Server  
☐ Use PPPoE Client  
☐ Use this address  
 Static IP Address   
 Subnet Mask

To set up PPPoE, [click here](#).

**Advanced Settings**

Default Gateway	<input type="text"/>
Address of DNS Name Server	Primary: <input type="text"/> Secondary: <input type="text"/>
Internet MAC Address	<input checked="" type="radio"/> Use Default MAC Address(AC:81:12:B7:02:98) <input type="radio"/> Use this address <input type="text"/>
MTU Size of Internet Port	<input type="text" value="1500"/> Bytes

**Internet Ethernet Settings**

Configuring your [Internet](#) side port:

Normally, you'll connect the [Internet](#) side port to an external network such as the internet.

**Method of Acquiring IP Address**

Select one of the following methods to acquire an [Internet port IP Address](#). Please ask your [Provider](#) for any other information about your line format. If you're not sure which method to choose, try selecting Easy Setup. You can confirm the status of the current [Internet](#) side [IP Address](#) on the System Information screen.

**Perform Easy Setup (Internet Connection Wizard)**

The Easy Setup scans your [Internet](#) connection and determines your internet connection type. The correct setup wizard for your internet connection is then activated automatically.

**Note:**

- Auto line determination [Easy Setup] is effective only for a line on which PPPoE or DHCP is used, such as a normal DSL or Cable high-speed internet.

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
Method of Acquiring IP Address	Specify how the Internet side IP address is obtained.
Default Gateway	Configure an IP address for the default gateway.
Address of DNS Name Server	Specify an IP address for the DNS server.
Internet MAC Address	Configure WAN-side MAC address. Note: Configuring an improper MAC address may make the AirStation unusable. Be careful!
MTU size of Internet Port	The Internet (WAN) port's MTU size may be set to any value from 578 to 1500 bytes.

## PPPoE (Router Mode only)

Configure PPPoE settings here.

Setup	Internet/LAN	Wireless Config	Security	LAN Config	Admin Config	Diagnostic

### Add/Edit PPPoE Connection

This field lets you edit or add a line to the table below.

#### Name of Connection

Enter a unique name such as the [Provider](#) name as the destination name. This must be entered, and you cannot enter an existing destination name. Up to 32 alphanumeric characters can be entered. Two-byte characters cannot be used.

**Note:**  
The Easy Setup configures the [Internet](#) side IP address. If the PPPoE server is detected, the [AUTO] connection is added to the connection list.

#### User Name

Enter the user name exactly as provided by your [Provider](#). A maximum of 64 characters may be entered. Also, use the given name (full name including characters after the @ symbol) if the [Provider](#) has provided one. The domain name after '@' can't be ignored. If the connection user name is incorrect, authentication with the PPPoE server will fail.

#### Password

Enter the password provided by your [Provider](#). Enter it a second time in the Confirmation field. A maximum of 64 characters may be used and is case sensitive.

(C)2000-2011 BUFFALO INC. All rights reserved.

### Parameter

### Meaning

Name of Connection

Enter the name to identify the connected destination. You may enter up to 32 alphanumerical characters and symbols.

UserName

Enter the PPPoE username provided by your ISP. You may enter up to 32 alphanumerical characters and symbols.

Password

Enter the password specified by your provider for PPPoE certification. You may enter up to 32 alphanumerical characters and symbols.

Parameter	Meaning
Service Name	Fill in this field only when your provider specifies a Service Name. Leave blank otherwise. You may enter up to 32 alphanumerical characters and symbols.
PPPoE Static IP	Select if using a static IP address. Insert a check mark in this check box, and specify the IP address in the PPPoE IP Address box.
PPPoE IP Address	Normally, PPPoE automatically obtains the IP address, but if you want to specify an IP address, specify the IP address using this setting. To enable, check "PPPoE Static IP".
PPPoE DNS 1 PPPoE DNS 2	Specify the DNS address. This setting is enabled when a check mark is inserted for PPPoE Static IP.
Connection Type	Specifies the timing for the AirStation to connect to your provider.
Automatic disconnection	Sets the timer for disconnection if the connection method is set to [Connect on Demand] or [Manual]. You can enter up to 1440 minutes.
Authorization	Configure an authorization method with a provider.
MTU Size	The PPPoE MTU size may be set to any value from 578 to 1492.
MRU size	The PPPoE MRU (Maximum Receive Unit) size may be set to any value from 578 to 1492.
Keep Alive	If enabled, the AirStation will request an LCP echo from the PPP server once a minute. If the connection server doesn't respond within 6 minutes, the Internet connection will be cut off. If the PPP connection is often cut off, disable this.

## DDNS (Router Mode only)

Configure Dynamic DNS settings here.

Parameter	Meaning
Dynamic DNS Service	Select a provider (DynDNS or TZO) for Dynamic DNS.
UserName Only when DynDNS is selected	Enter the username that you registered with DynDNS. You may enter up to 64 alphanumerical characters and symbols.
Password Only when DynDNS is selected	Enter your DynDNS password. You may enter up to 64 alphanumerical characters and symbols.
Hostname Only when DynDNS is selected	Enter your DynDNS hostname. Hostnames may include up to 255 alphanumerical characters, hyphens, and periods.
Email Address Only when selecting TZO	Enter the email address that you registered with TZO. You may enter up to 64 alphanumerical characters and symbols.
TZO Key Only when selecting TZO	Enter your TZO key. TZO keys may have up to 64 alphanumerical characters and symbols.
Domain Name Only when selecting TZO	Enter your TZO domain name. You may enter up to 255 alphanumerical characters, hyphens, and periods.

Parameter	Meaning
IP Address Update Period	Specifies the period to notify the dynamic DNS service provider of the current IP address. When DynDNS is selected, set it between 0 and 35 days. When TZO is selected, set it between 0 and 99 days. If 0 (zero) is set, no periodic update is performed.
Internet Side IP Address	The WAN-side IP address of the AirStation's Internet port. This address is sent to the dynamic DNS service provider.
Domain Name	The domain name assigned by the dynamic DNS Service provider. The AirStation can be accessed from the Internet using this domain name.
Status	Displays the current status of the dynamic DNS service.

## LAN

Configure the LAN side port and DHCP server settings.

Parameter	Meaning
LAN Side IP Address	Set a LAN side IP address and subnet mask.
DHCP Server Function Router Mode only	Enable or disable the DHCP server, which assigns IP addresses automatically.
DHCP IP Address Pool Router Mode only	Configure the range of IP addresses to be assigned by the DHCP server and IP addresses to be excluded from that range. Values from 0-253 may be entered.
Advanced Settings Router Mode only	Select Display to display the advanced settings options for the DHCP server.
Lease Period Router Mode only	Set the effective period of an IP address assigned by the DHCP server. Up to 999 hours may be entered.
Default Gateway Router Mode only	Set the default gateway IP address for the DHCP server to issue to clients.
DNS Servers Router Mode only	Set the DNS server IP address for the DHCP server to issue to clients.
WINS Server Router Mode only	Set the WINS server IP address for the DHCP server to issue to clients.

Parameter	Meaning
Domain Name Router Mode only	Set the domain name for the DHCP server to issue to clients. You may enter up to 127 alphanumerical characters, hyphens, and periods.
Default Gateway Bridge Mode only	Set the default gateway IP address.
DNS Server Address Bridge Mode only	Set the DNS server IP address.

## DHCP Lease (Router Mode only)

Configure DHCP leasing here.

Parameter	Meaning
IP Address	Enter an IP address to lease manually. The IP address should be from the same subnet as the DHCP scope, but not be within the range that DHCP is assigning to other devices.
MAC Address	Enter the MAC address which identifies the client.
Current DHCP Client Information	Displays information for current leases. An IP address which is leased automatically can be changed to be leased manually by clicking [Manual Assignment].

## NAT (Router Mode only)

Configure NAT (network address translation) settings here. NAT is used to connect devices on the LAN side to the Internet.

Parameter	Meaning
Address Translation	Enable to use Network Address Translation.
Log Output of Deleted Packets	Enable logging for deleted packets (such as errors) during address translation.

# Route

Add routes to the NAT table.

WPS(WiFi Protected Setup)

WPS

Configuring WPS  
WPS is WiFi Protected Setup which corresponds to Windows Connect Now-NET (WCN-NET). WPS is also known as the Wi-Fi Simple Configuration Protocol. WPS function can safely and easily distribute wireless security information from an access point (AirStation) to the WPS clients. The WPS device which registers wireless security information is called Registrar. The AirStation has an internal Registrar built-in it, but can also use an External Registrar.

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
WPS	Enable to use WPS automatic configuration.
External Registrar	Enable to accept configuration requests from other WPS devices. Note: Configuration requests will be ignored if AOSS is in use.
AirStation PIN	Displays the AirStation's PIN code. Click [Generate PIN] to generate a new PIN code. This code can be entered into other WPS-compatible wireless devices.
Enrollee PIN	Enter the PIN code for the other wireless device and click [OK].
WPS status	Displays WPS status as "configured" or "unconfigured".

## AOSS

### AOSS (AirStation One-Touch Secure System)

AOSS is Buffalo's unique technology for quickly forming a secure wireless connection. You can see AOSS's configuration and status from this screen.

**[Start AOSS] button**  
 Click this button to start AOSS. The AOSS button on top of the router works the same as this button. Refer to [How to use AOSS](#) for more details.

**[Disable AOSS] button**  
 This button appears when AOSS is enabled. Click this button to disable AOSS. Connections to wireless clients will be terminated, AOSS Information removed, and Encryption Type reset to its default value, AES. Current Encryption Information will also be removed. Wireless Setting and Wireless Security are enabled in Advanced Settings when AOSS is disabled.

#### How to use AOSS

How to use AOSS:

**(1)First**  
Power on or reboot the AirStation and a wireless client that supports AOSS.

**(2)Press AOSS buttons**  
After rebooting, press both product's AOSS buttons, the router's first, then the client's. The AirStation and the wireless client will exchange security information to set up the most secure encryption type automatically and are ready to communicate.

**Note:**

- Once the AOSS button is pressed, other operations can't be started until AOSS is finished. If the AirStation can't find a wireless client after three minutes, the AirStation's status returns to its previous state.
- Up to 24 wireless clients may be connected through AOSS.
- By default, AOSS is functional but does not initiate a connection unless started manually by pushing the AOSS button, either here or on the top of the router.
- Use AirStation's System Information page to manually configure a wireless client that doesn't support AOSS.
- When wireless security is configured, its security information is succeeded.

In the following cases, the setting of wireless security is not

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
	Initiates AOSS automatic wireless configuration. Click this, then press or click the AOSS button on your AOSS-compatible wireless client. Repeat for additional AOSS clients.
	Click this button to disconnect AOSS connections. Note : If AOSS connections are disconnected, the SSID and encryption keys will be restored to their most recent settings before using AOSS.
Exclusive SSID for WEP	You may allow a separate SSID for WEP connections. If this is disabled, clients will not be able to connect with WEP.
Dedicated WEP SSID isolation	Set a separate SSID and network segment specifically for WEP connections. Devices connected with WEP will not be able to communicate with devices connected using AES. All connected devices will be able to communicate with the internet.
AOSS Button on the AirStation Unit	If enabled, AOSS will be initiated when the physical AOSS button is pressed. Disable to prevent the button from initiating AOSS.
Current Encryption Information AOSS Connection only	Displays the type of encryption, SSID, and encryption key that AOSS has configured.
[Random]	Click to enter random values for SSID, encryption key, and other settings.
[Reset]	Click to return the SSID, encryption key, and other wireless settings to their previous values.
AOSS Client Information AOSS Connection only	Displays status of connected AOSS clients.

Rekey interval	60 minutes

### Basic Wireless Setting(11n/g/b)

You can set basic configuration information for your wireless LAN manually here. If encryption is not used, communication will be established just by this basic setup. Encryption is highly recommended, however.

#### Wireless Radio

Un-checking "Enable" will disable wireless LAN functionality. When disabled, all wireless functionality, including broadcasting, is halted. Default value is enabled.

#### Wireless Channel

You may specify a channel (frequency band) for your wireless communication. If there are other wireless clients near the AirStation, you may get interference. Change to a different (and preferably non-overlapping) channel in this case. Available channels vary with which wireless standard you're using. When Auto channel is selected, a vacant channel is selected automatically. 11n/g/b : Auto, 1-11 Channel (Default value : Auto channel)

#### 300Mbps Mode

Wireless communication commonly uses 20MHz per channel. 300Mbps Mode is a method to increase wireless transmission throughput to 40MHz per channel. When 300Mbps Mode is used, the channel display on the wireless client is likely going to differ from the channel display on the AP. The wireless client channel display may not display the Control Channel but the center frequency. In this case, the channel between the Wireless Channel and the Extension Channel is displayed.

Example : When channel 3 is selected as Wireless Channel, and channel 7 is selected as the Extension Channel, channel 5 is displayed.

#### Band Width

You can select whether 20MHz or 40MHz (300Mbps Mode) are used

(C)2000-2011 BUFFALO INC. All rights reserved

Parameter	Meaning
Wireless Radio	Enable to allow wireless communication. If this is unchecked, then no wireless connections will be allowed.
Wireless Channel	Sets a channel (a range of frequencies) used for wireless connections. Available range of channels is 1-11. With Auto Channel selected, the AirStation will automatically use the best available channel. This parameter is disabled if WDS is in use.
300 Mbps Mode	300 Mbps mode uses twice the normal frequency range, 40 MHz instead of 20 MHz. In uncongested areas this can increase performance. To use 300 Mbps mode, set the Bandwidth to 40 MHz and choose an Extension Channel. Note: If using Auto Channel for the wireless channel, then the Extension Channel is set automatically. This parameter is disabled if WDS is in use.
Broadcast SSID	If "Allow" is checked, then the AirStation will respond to SSID searches from wireless devices by broadcasting its SSID. If "Allow" is unchecked, then the AirStation ignore SSID searches from wireless devices.
SSID1	For Multi Security SSID1, wireless encryption must be set as No encryption, WPA-PSK-AES, WPA2-PSK-AES, WPA/WPA2-Mixed or WEP.
SSID2	For Multi Security SSID2, wireless encryption must be set as No encryption, WPA-PSK-AES, WPA2-PSK-AES, WPA/WPA2-Mixed or WEP.
SSID3	SSID3 can use WEP encryption.
Separate feature	When enabled, wireless devices connected to the AirStation can communicate only with the Internet, not with each other. This parameter does not function if WDS is enabled.
SSID	Set SSID using 1-32 alphanumeric character(s).
Authentication	Specify the type of wireless authentication.

Parameter	Meaning
Encryption	<p>Select a type of data encryption for wireless communication from the following options:</p> <p><b>No encryption</b> Data is transmitted without encryption. Avoid this option since any communication may be intercepted. [No encryption] can be selected only when [No authentication] is selected for Wireless authentication.</p> <p><b>WEP</b> WEP is a common encryption method supported by most devices. Use an encryption key to communicate with a wireless device. WEP can only be selected when [No authentication] is selected for Wireless authentication.</p> <p><b>AES</b> AES is more secure than TKIP, and faster. Use a pre-shared-key to communicate with a wireless device. AES can be selected only when WPA-PSK or WPA2-PSK is selected for Wireless authentication.</p>
WPA-PSK (Pre-Shared Key)	<p>Enter a pre-shared key for use with wireless authentication. Keys may be character or hexadecimal. For a character key, use 8 to 63 alphanumeric characters (case-sensitive). For a hexadecimal key, enter 64 digits using 0 to 9 and a to f (not case-sensitive).</p>
Setup WEP encryption key	<p>Enter an encryption key to encrypt wireless data. Keys may be character or hexadecimal. For a character key, use 5 or 13 alphanumeric characters (case-sensitive). For a hexadecimal key, enter 10 or 26 digits using 0 to 9 and a to f (not case-sensitive).</p>
Rekey interval	<p>Choose an interval from 0 to 1440 minutes for keys to be updated.</p>

## Advanced

Configure advanced wireless settings on this page. Don't change these settings unless you know what you're doing.

The screenshot shows the Buffalo AirStation configuration interface. The top navigation bar includes tabs for Setup, Internet/LAN, Wireless Config, Security, LAN Config, Admin Config, and Diagnostic. Under the Wireless Config tab, there are sub-tabs: WPS, AOSS, Basic(11n/g/b), Advanced(11n/g/b) (which is selected), WMM(11n/g/b), MAC Filter, and WDS. A Manual Logout link is also present. The main content area is divided into two sections. The left section contains three settings: Multicast Rate (set to 1 Mbps), DTIM Period (set to 1), and Privacy Separator (unchecked). An Apply button is at the bottom of this section. The right section is titled 'Advanced Wireless Settings (11n/g/b)' and contains the text 'Specify Advanced Wireless Settings.' followed by a 'Multicast Rate' section. This section states: 'You can select 1, 2, 5.5, 6, 9, 11, 12, 18, 24, 36, 48, 54Mbps. Default Value is "1Mbps".' A copyright notice at the bottom reads '(C)2000-2011 BUFFALO INC. All rights reserved.'

Parameter	Meaning
Multicast Rate	Sets the communication speed of multi-cast packets.
DTIM Period	Set the beacon responding interval (1 -255). This setting is effective only when power management is enabled.
Privacy Separator	If enabled, the Privacy Separator blocks communication between wireless devices connected to the AirStation. Wireless devices will be able to connect to the Internet but not with each other. Devices that are connected to the AirStation with wired connections will still be able to connect to wireless devices normally.

## WMM

Configure priorities for specific types of data. Don't change these settings unless you know what you're doing.

Setup	Internet/LAN	Wireless Config	Security	LAN Config	Admin Config	Diagnostic
WPS	AOSS	Basic(11n/g/b)	Advanced(11n/g/b)	WMM(11n/g/b)	MAC Filter	WDS
						Manual Logout

### WMM-EDCA Parameters

Priority	Parameter	For AP	For STA
AC_BK(Low)	CWmin:	15	15
	CWmax:	1023	1023
	AIFSN:	7	7
	TXOP Limit:	0	0
AC_BE(Normal)	CWmin:	15	15
	CWmax:	63	1023
	AIFSN:	3	3
	TXOP Limit:	0	0
AC_VI(High)	CWmin:	7	7
	CWmax:	15	15
	AIFSN:	1	2
	TXOP Limit:	94	94
AC_VO(Highest)	CWmin:	3	3
	CWmax:	7	7
	AIFSN:	1	2
	TXOP Limit:	47	47

### WMM Settings (11n/g/b)

Prioritized AirStation communication for specific transactions. This settings provides some real time communication, which can help improve the quality of VOIP or other streaming protocols.

### WMM-EDCA Parameters

It is usually not necessary to change this value.

### Priority

The priority is ranked (Highest)8 : (High)4 : (Normal)2 : (Low)1 for each packet.

### Parameter

#### CWmin, CWmax

The maximum and minimum value for the contention window. The contention window is used to control the frame collision avoidance system in IEEE802.11. Values that can be inputted: 1-32767.

#### AIFSN

Interval of the sending frame. The unit defines a time-slot (similar to the window value of CWmin, CWmax). Lower values define a higher priority as the back-off algorithm starts earlier. Values that can be inputted: 1-15.

#### TXOP Limit

The time for the queue to obtain

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
WMM-EDCA Parameters	<p>You don't usually need to change these settings. Using the default settings is recommended.</p> <p><b>Priority</b></p> <p>The following priorities may be applied to individual transmission packets: (Highest) 8, (High) 4, (Normal) 2, and (Low) 1. From the queue, these packets are processed in order of priority.</p> <p><b>CWmin, CWmax</b></p> <p>The maximum and minimum value of the contention window. The contention window is used in the frame collision avoidance structure performed in IEEE802.11, and generally the smaller the value in the window, the higher the probability that the queue obtains the right to send.</p> <p><b>AIFSN</b></p> <p>The interval to send frames. The unit of the AIFSN is a slot, just as the window defined by CWmin and CWmax is. The smaller the interval of sending frames, the faster the algorithm can restart. As a result, the priority of the queue is higher.</p> <p><b>TXOP Limit</b></p> <p>The period of time that the queue can use after obtaining the right to send. The unit is 32 ms. The longer this time, the more frames can be sent per right to send. However, the queue may interfere with other packet transmissions. If TXOP Limit is set to 0 (zero), only one frame can be sent per right to send.</p>

---

## MAC Filter

MAC filtering allows only devices with registered MAC addresses to connect to the AirStation wirelessly.

Setup Internet/LAN **Wireless Config** Security LAN Config Admin Config Diagnostic

Authentication	Enter the target AirStation's wireless authentication method.
Encryption	Enter the target AirStation's encryption type.
WPA-PSK (Pre-shared key)	Enter the target AP's Encryption key (if used).
WEP encryption key setting	Enter the target AP's WEP key (if used).

## Security (Router Mode only)

### Firewall (Router Mode only)

Configure the AirStation's firewall here.

Setup Internet/LAN Wireless Config **Security** LAN Config Admin Config Diagnostic

Firewall IP Filter VPN Pass Through Manual Logout

Log Output ☐ Enable

Enable	Basic Rules	Number of Packets
<input type="checkbox"/>	Prohibit NBT and Microsoft-DS Routing	0
<input checked="" type="checkbox"/>	Reject IDENT Requests	0
<input checked="" type="checkbox"/>	Block Ping from Internet	0

Apply

**Firewall**

Limits the type of packets allowed to pass between the Internet and LAN. When packets reach the AirStation, the firewall evaluates the packets, and forwards packets that don't match any filter to their destination. The Firewall blocks unnecessary packets from the Internet side and prevents leaking secure information from the LAN side.

**Log Output**  
Checking this box will record

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
Log Output	Enable to output a log of firewall activity.
Basic Rules	<p>Enable to use any of the quick filters. Preconfigured quick filters include:</p> <p><b>Prohibit NBT and Microsoft-DS Routing</b></p> <p>When this is enabled, Microsoft file and printer sharing is blocked between the WAN and LAN sides of the router. You can configure this with PPPoE if you select [Use PPPoE Client] or [Use IP Unnumbered] in Method of Acquiring IP address (on page 24), or if Easy Setup identified a PPPoE connection during setup.</p>

Parameter	Meaning
	<b>Reject IDENT Requests</b> Enabling this option will answer IDENT requests from the Internet side with corresponding rejection packets. Enable this option if you experienced slower transfer speed for network application such as sending mail, using ftp or displaying on browser. If you have configured transfer of IDENT requests to the LAN side computer in the address translation settings (DMZ or TCP port:113), that setting has higher priority, and overrides this setting.
	<b>Block Ping from Internet</b> If this is enabled, the AirStation will not respond to pings from the Internet side. You can configure this with PPPoE if you select [Use PPPoE Client] in Method of Acquiring IP address (page 24), or if Easy Setup identified a PPPoE connection during setup.

## IP Filter (Router Mode only)

Edit IP filters here.

Add Rule

### IP Filter Information

Operation	Direction	Source Address	Destination Address	Protocol	Count	Customize
The IP Filter has not been configured yet						

#### IP Filter Settings

Limits the type of packets allowed to pass between the Internet and LAN. The maximum number of rules is 32. If the packet meets one of the monitoring conditions (see below) before it is routed, the specified action will be taken. If multiple conditions (see below) are met, the appropriate action will be performed once the packet meets the condition.

#### Log Output

Checking this box will record IP filtering information to a log. If Operation is Accepted, log output is disabled. The default is Disabled.

#### Add/Edit IP Address Based Filter

This area is for adding or editing a line.

#### Operation

Select the action to be performed on packets that meet filter criteria.

**Ignored**  
Stop the packet and do not route it.

**Rejected**  
Return the rejected packet to the point of origin.

**Accepted**  
Pass the packet through.

(C)2000-2011 BUFFALO INC. All rights reserved.

### Parameter

### Meaning

Log Output	If enabled, IP filter activity is saved to a log.
Operation	Specify how to process target packets.
Direction	Specify the transmission direction of target packets.
IP Address	Specify the sender's IP address and receiver's IP address of the target packets.
Protocol	Select a protocol for target transmission packet.
IP Filter Information	Display the list of IP filters which have been registered.

## VPN Pass-Through (Router Mode only)

Configure IPv6 pass-through, PPPoE pass-through, and PPTP pass-through here.

Parameter	Meaning
IPv6 Pass-through	Enable to use IPv6 pass-through for address translation.
PPPoE Pass-through	Enable to use PPPoE bridge. Using PPPoE bridge lets you automatically obtain LAN-side IP addresses from your provider using the PPPoE protocol because all PPPoE packets can pass through from the LAN to the WAN side.
PPTP Pass-through	Enable to use the PPTP pass-through for address translation.

# LAN Config (Router Mode only)

## Port Forwarding (Router Mode only)

Configure port translation here.

Port Forwarding Registration Information

Group	Internet Side IP Address	Protocol	Customize
	LAN Side IP Address	LAN Side Port	

Port Forwarding has not been set up yet

Port Forwarding Settings

Although the AirStation performs Address Translation only for communication which is started from the LAN side, certain applications, such as network games, require that you allow communications from the Internet (the Internet) side via (Static NAT). Edit the rules for communicating from outside the internal network to the LAN side network device(Static NAT) carefully, consulting your internet game's documentation as necessary. Up to 32 rules can be registered.

Add/Edit Port Forwarding

You can add new port forwarding information and edit existing information.

Group

You can give a name (group name) to configured Static NATs and give multiple Static NATs one name and manage them together. By giving names to groups, you can [Enable] or [Disable] each separately. To add a Static NAT rule to existing group, select the group from the drop-down box and choose [Add].

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
Group	Specify a group name for a new rule to belong to. Select [New Group] and enter the new group name in the Group Name field to create a new group. A group name can include up to 16 alphanumeric letters.
Internet Side IP Address	Enter the Internet side IP address (before translation) for the port translation table entry.
Protocol	Select the Internet side protocol (before translation) for the port translation table entry.

Parameter	Meaning
LAN Side IP Address	Enter the LAN side IP address (after translation) for the port translation table entry.
LAN Side Port	Select the LAN side (after translation) port number (1 - 65535) for the port translation table entry.
Port Forwarding Registration Information	Shows current entries in the port translation table.

## DMZ (Router Mode only)

Configure a destination to transfer communication packets without a LAN side destination to.

Parameter	Meaning
IP Address of DMZ	Enter the IP address of the destination to which packets which are not routed by a port translation table are forwarded. Note: RIP protocol packets (UDP port number 520) will not be forwarded.

# UPnP (Router Mode only)

Enable UPnP (Universal Plug and Play) here.

Parameter	Meaning
UPnP	Enable or disable Universal Plug and Play (UPnP) functionality.

## QoS (Router Mode only)

Configure priorities for types of packets passing through the router.

QoS for transmission to the Internet ☒ Enable

Upload Bandwidth  Kbps

No.	Enable	Application Name	Protocol	Destination Port	Priority
1	<input type="checkbox"/>	VoIP	UDP		high
2	<input type="checkbox"/>	ssh	TCP	22	medium
3	<input type="checkbox"/>	telnet	TCP	23	medium
4	<input type="checkbox"/>	ftp	TCP	21	low
5	<input type="checkbox"/>		TCP		high
6	<input type="checkbox"/>		TCP		high
7	<input type="checkbox"/>		TCP		high
8	<input type="checkbox"/>		TCP		high

Apply

**QoS Setting**

QoS is a technology to use the bandwidth on the network more effectively. When two or more packets arrive at the same time, the packet with higher priority is processed first. This can be used to give priority to communications that require real time processing, such as VOIP.

**QoS for transmission to the Internet**

If checked, this gives priority to packets being transmitted to the Internet. When enabled, you will be able to add four levels of increased priority for specific applications. By default, this is disabled.

**Upload Bandwidth**

Specify the bandwidth transferred from this unit to the Internet in kbps. The real uplink bandwidth should be entered. If a bandwidth value larger than the real line speed is entered, the uplink bandwidth will be limited by the line speed.

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
QoS for transmission to the Internet	Determine whether or not to prioritize packets by application. Check this box to enable QoS.
Upload bandwidth	Specify the upstream bandwidth in kbps from the AirStation to the internet side.
Enable	Enable or disable this entry.
application name	Enter an application name. Names may use up to 32 alphanumeric characters, double or single tickmarks (""), quotation marks (""), and semicolons (;).
protocol	Select either TCP or UDP.

Parameter	Meaning
destination port	Specify a destination port with the value of 1 - 65535. If this field is empty, a random port is selected.
priority	Select high, medium, or low priority for these packets. Packets whose type isn't on the list are treated as a level between medium and low.

## Admin Config

### Name

Configure the AirStation's name.

Parameter	Meaning
AirStation Name	Enter a name for the AirStation. Names may include up to 64 alphanumeric characters and hyphens (-).

# Password

You may change the login password for the configuration interface here.

**NTP is enabled. Changes made to time and date settings may be overwritten by the NTP server when it syncs.**

Local Date: 2011 Year 11 Month 21 Day

Local Time: 4 Hour 33 Minute 46 Seconds

Time Zone: (GMT+00:00) Greenwich Mean Time, London

Apply Refresh Get Current Time from your PC

**Time/Date**

Set the AirStation's internal clock.  
Set the internal clock manually.

**Note:**  
The AirStation's internal clock is reset to its default setting whenever power is lost because it doesn't have a battery. However, the AirStation may be configured to adjust its clock automatically even when rebooted by connecting it to a NTP server. You may also reset its time.

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
Local Date	You may manually set the date of the AirStation's internal clock.
Local Time	You may manually set the time of the AirStation's internal clock.
Time Zone	Specify the time zone (offset of Greenwich Mean Time) of the AirStation's internal clock.

## NTP

You may configure an NTP server to automatically correct the AirStation's time settings.

Parameter	Meaning
NTP Functionality	Enable to use an NTP server to automatically set the AirStation's internal clock.
NTP Server	Enter the name of the NTP server as a host name, host name with domain name, or IP address. Up to 255 alphanumeric characters, hyphens (-), and underscores (_) may be used.
Update Interval	How often should the AirStation submit a time request to the NTP server? Intervals of 1 - 24 hours may be set.

### System Information

Display the AirStation's main settings.

**Model**  
Displays the model name and firmware version of the AirStation.

**AirStation Name**  
Displays the AirStation's host name.

**Operational Mode**  
Displays the current mode of operation.

**Internet**  
AirStation's [Internet port](#) side information.

**Method of Acquiring IP Address**  
Acquiring a Internet IP address.

**Name of the Connection**  
The name of the PPPoE connection specified in the configuration.

**Connection Status**  
Displays the current Internet side status.

**Operational Mode**  
The Operational Mode will show if any DHCP or PPPoE configuration is active. If DHCP is in use, the following commands can be executed.

- [Release] : Releases the IP address assigned by the DHCP Server.
- [Renew] : Renews the IP address from the DHCP Server.

The following commands can be executed when using PPPoE.

- [Start] : Start connecting to a PPPoE Server from idle/stop.
- [Connect] : Connect to PPPoE from an idle condition.
- [Disconnect] : Disconnect communication with a PPPoE Server.
- [Stop] : Stop idle condition.

**IP Address**  
The IP address assigned to the AirStation.

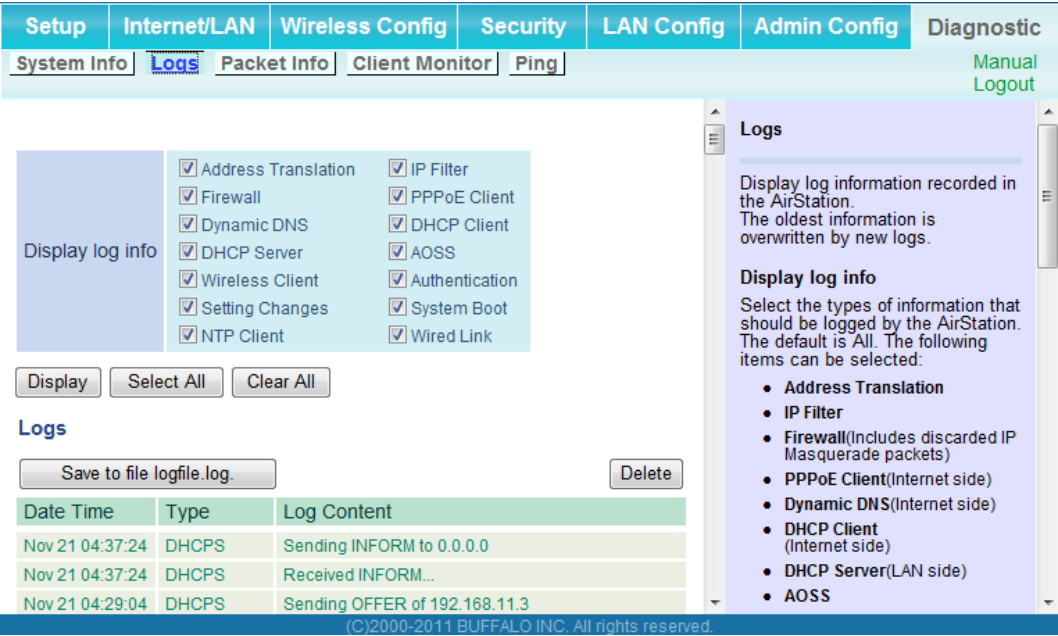

**Subnet Mask**

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
Model	Displays the product name of the AirStation and the firmware version.
AirStation Name	Displays AirStation Name (as set on page 54).
Operational Mode	Displays the current operational mode of the AirStation.
Internet Router mode only	Displays WAN port information.
LAN	Displays LAN port information.
Wireless	Displays wireless status.
WDS	Displays the status of WDS.
ECO Mode	This indicates the operating status of ECO Mode.

# Logs

View the AirStation’s logs here.

Parameter	Meaning
Display log info	Choose the type of logs to display.
Logs	Displays the selected logs.

## Packet Info

This screen shows the packets that the AirStation has transferred.

Interface	Sent		Received	
	Normal	Errors	Normal	Errors
Wired Internet	17620	0	34585	0
Wired LAN	41246	0	23270	0
Wireless LAN (802.11n/g/b)	41	0	29879	0

Refresh

**Packet Traffic Information**

The total numbers of packets sent and received by the AirStation, as well as the errors sending and receiving, are displayed.

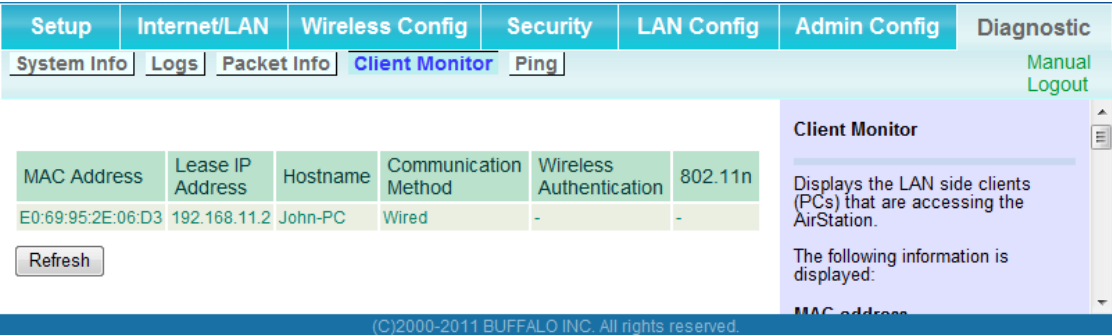

**[Refresh] button**  
Displayed packet information is renewed with current information when this button is clicked.

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
Sent	Displays the number of packets sent to the WAN (Internet), the Ethernet LAN, and the wireless LAN.
Received	Displays the number of packets received from the WAN (the Internet), the Ethernet LAN, and the wireless LAN.

# Client Monitor

This screen shows devices that are connected to the AirStation.

Parameter	Meaning
Client Monitor	Displays information (MAC address, lease IP address, host name, communication method, wireless authentication and 802.11n) for devices that are connected to the AirStation.

# Ping

A ping test checks whether the AirStation can communicate with a specific network device.

SetupInternet/LANWireless ConfigSecurityLAN ConfigAdmin ConfigDiagnostic

System InfoLogsPacket InfoClient MonitorPingManualLogout

Destination Address

Execute

Result

Destination	192.168.11.2
Result	64 bytes from 192.168.11.2: seq=0 ttl=128 time=1.123 ms 64 bytes from 192.168.11.2: seq=1 ttl=128 time=0.909 ms 64 bytes from 192.168.11.2: seq=2 ttl=128 time=1.036 ms

Ping

A Ping test can be performed from the AirStation. With a ping test, you can determine whether the AirStation can communicate with a specific network device.

Destination Address

Enter the network IP address that you want to ping; e.g. 192.168.11.3 or www.buffalotech.com.

Execute

(C)2000-2011 BUFFALO INC. All rights reserved.

Parameter	Meaning
Destination Address	Enter an IP address or a hostname to ping, and click [Execute]. The result will be displayed in the Result field.

# Chapter 4 - Connect to a Wireless Network

## Automatic Secure Setup (AOSS/WPS)

AOSS and WPS are systems that enable you to automatically configure wireless LAN settings. Just pressing the buttons will connect wireless devices and complete security settings. Use them to automatically connect wireless devices, computers, or game machines which support AOSS or WPS.

AOSS (AirStation One-Touch Secure System) is technology developed by Buffalo Technology. WPS was created by the Wi-Fi Alliance.

- Before using AOSS or WPS to connect the Buffalo wireless client to the computer, download Client Manager or AOSS Assistant from the Buffalo web site, and install it.
- Buffalo's Client Manager software can be used with the wireless LAN devices built into your computer. However, it is not guaranteed to work with all wireless LAN devices available.

### Note:

To configure WDS with AOSS, you must use a different AOSS button. Refer to page 14 for more information on using AOSS to configure a WDS bridge.

If you use AOSS to configure WDS, any wireless clients that were previously connected to the AirStation via AOSS will have been disconnected. Refer to the following procedure to reconnect them.

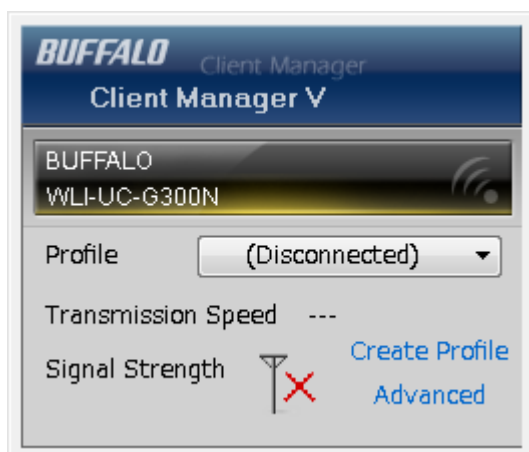

## Windows 7 or Vista (Client Manager V)

If you are using Windows 7 or Vista, use the Client Manager V to connect wirelessly with AOSS or WPS.

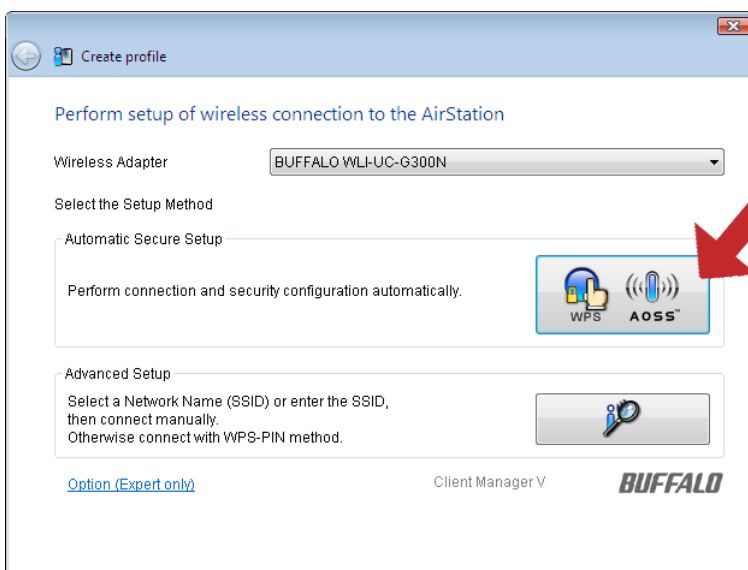

**1** Click [Start] > [All Programs] > [BUFFALO] > [AirStation Utility] > [Client Manager V].

**2** Click [Create Profile].

**3** If the User Account Control screen opens, click [Yes] or [Continue].

**4** Click the [WPS AOSS] button.

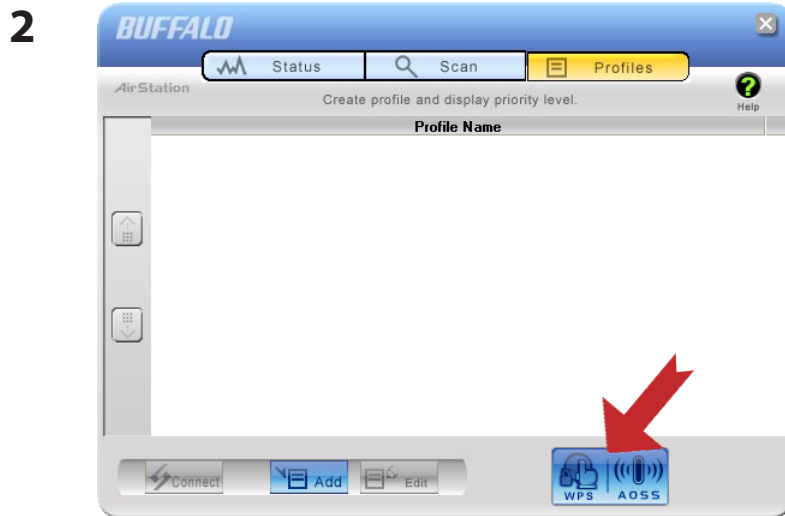

Follow any instructions displayed on the screen. When the Security LED on the front of the AirStation stop flashing and glows steadily, the connection is complete.

## Windows XP (Client Manager 3)

If you are using Windows XP, use Client Manager 3 to connect wirelessly with AOSS or WPS.

**1** Right click on the  icon in the system tray and select [Profile].

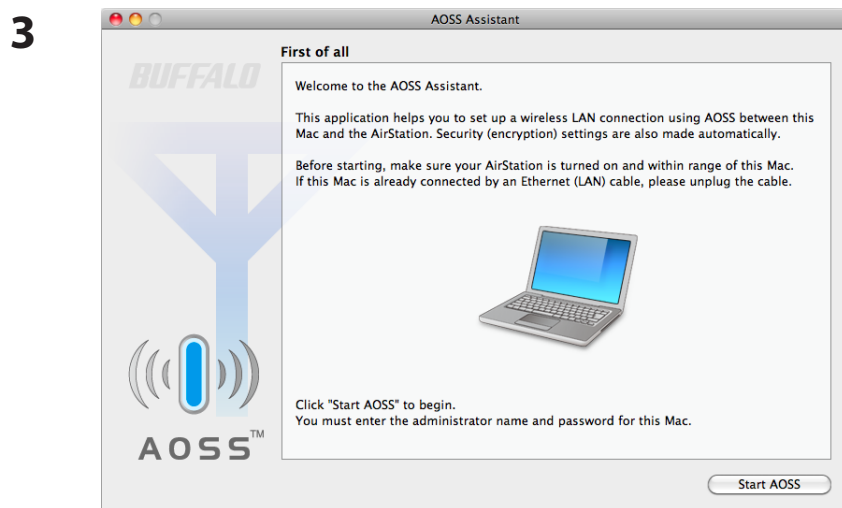

Click the [WPS AOSS] button.

It will take several seconds for your wireless connection to be configured. When the Security LED on the front of the AirStation stop flashing and glows steadily, the connection is complete.

## Mac OS X (AOSS Assistant)

If you are using Mac OS X 10.7 / 10.6 / 10.5 / 10.4, use the AOSS Assistant to connect wirelessly with AOSS.

- 1 Run the AOSS Assistant program that was downloaded from the Buffalo web site.
- 2 The software license screen is displayed. Click [Agree] to proceed.

Click [Start AOSS ].

Enter the Mac's username and password and click [OK].

It will take several seconds for your wireless connection to be configured. When the Security LED on the front of the AirStation stop flashing and glows steadily, the connection is complete.

## Other Devices (e.g. Game Console)

If you are using a game machine which supports AOSS or WPS, refer to that device's manual to initiate AOSS or WPS. When instructed, hold down the AOSS button on the AirStation for 1 second.

When the Security LED on the front of the AirStation stop flashing and glows steadily, the connection is complete.

## Manual Setup

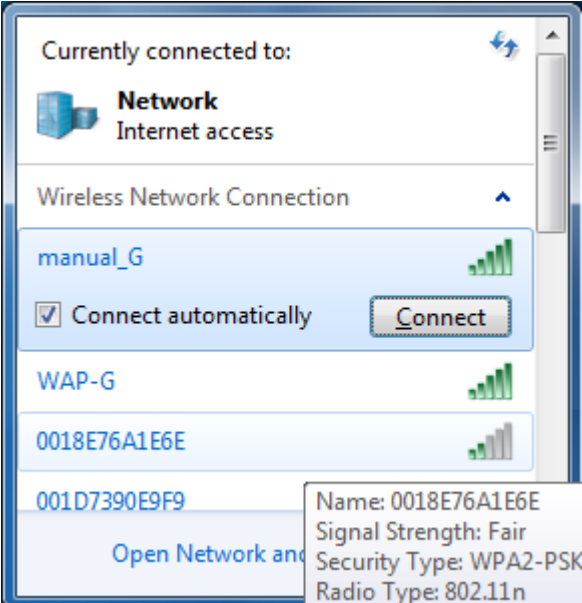

---

You can also connect to the AirStation without installing Client Manager V or Client Manager 3 by using the utility built-in to operating system. The procedure varies depending on which version of operating system you are using.

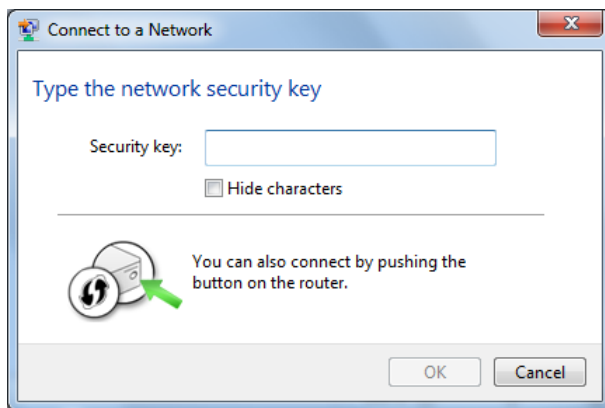

### Windows 7 (WLAN AutoConfig)

With Windows 7, use WLAN AutoConfig to connect to the AirStation.

- 1 Click on the  network icon in the system tray.

- 2  Select the target AirStation's name and click [Connect]. If you will be connecting to this device in the future, checking [Connect automatically] is recommended.

3

Enter the encryption key and click [OK].

## Windows Vista (WLAN AutoConfig)

With Windows Vista, use WLAN AutoConfig to connect to the AirStation.

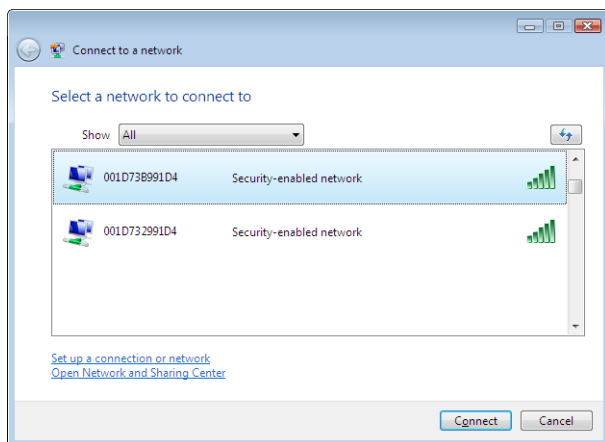

1

Right click on the wireless network icon  in the system tray.

2

Click [Connect to a network].

3

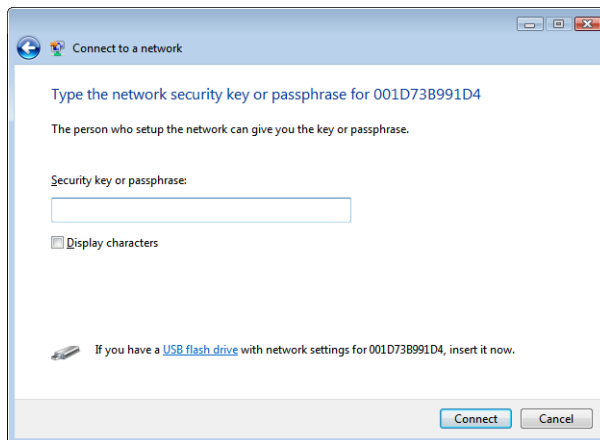

When the screen at left is displayed, select the network to connect to and click [Connect].

If the screen below is displayed, click “I want to enter the network key or passphrase instead”. Otherwise, go to step 4.

4

Enter the encryption key and click [Connect].

Step through the wizard to finish configuration. If the Set Network Location screen is displayed, select [Home], [Work], or [Public location] depending where you're using the AirStation.

## Windows XP (Wireless Zero Configuration)

Windows XP includes a built-in utility to connect to your AirStation.

**Note:** If Client Manager 3 is installed on your computer, Wireless Zero Config is disabled. Uninstall Client Manager 3 to use Wireless Zero Config, or just use Client Manager 3 to connect to the AirStation.

**1** Right click on the  icon in the system tray.

**2** Click [View Available Wireless Networks].

**3** Select the network to connect to and click [Connect].

**4** Enter the encryption key (twice) and click [Connect].

Wireless Zero Config will automatically connect you to the network.

## Mac OS X (Wi-Fi)

Use Wi-Fi on a Mac to connect to the AirStation.

1

Click the  icon in the top section of the screen and select [Turn Wi-Fi On].

2

Find the target AirStation's name.  
Click it to highlight it.

3

Enter the encryption key and click [Join].

It will take several seconds for configuration to complete.

# Chapter 5 - Troubleshooting

## Cannot connect to the Internet over wired connection.

---

- Make sure that your AirStation is plugged in!
- Check that the status LEDs of your AirStation are lit as below:

Power	Green LED is on.
Wireless	Green LED on or flashing
Router	Green LED may be on or off
Diag	Off
- Make sure that your computer is set to [obtain an IP address automatically]. See page 96 for more information.
- Restart your AirStation.

## Cannot access the web-based configuration interface.

---

- Open the configuration interface by following the procedure on page 71.
- Enter the correct username and password to log in to the configuration interface.  
If you are using AirStation with factory default settings, enter "admin" for the username and "password" for the password.
- Verify that your web browser is not set to use proxies.
- Make sure that your computer is configured to [Obtain an IP Address Automatically]. (page 96)
- Restart your AirStation.

## Cannot connect to the network wirelessly.

---

- Configure your wireless device with the same SSID, encryption type, and encryption key as used by your AirStation.

The factory defaults are:

SSID - BUFFALO-XXXXXX (the last 6 digits of the AirStation's MAC address)

Encryption Type - No encryption

Encryption Key - none

- Place your AirStation and wireless devices 2 - 10 feet apart.
- Restart your AirStation.

## You forgot AirStation's SSID, Encryption Key, or Password.

---

Hold down the Reset button (page 100) on your AirStation for 3 seconds to initialize its settings. All settings, including your password, SSID, and encryption key will be initialized to their defaults.

The followings are the factory default settings of the AirStation.

SSID - BUFFALO-XXXXXX (the last 6 digits of the AirStation's MAC address)

Encryption Type - No encryption

Encryption Key - none

## The link speed is slower than 300 Mbps.

---

By default, the AirStation's 300 Mbps mode is not enabled. To enable it, use the following procedure:

1. Open the configuration interface of your AirStation (page 71).
2. Click [Wireless SSID & Channel (11n 300Mbps Mode)] in Easy Setup.
3. Change the value in [300 Mbps Mode] - [Band Width] to 40 MHz and click [Apply].

If you still cannot connect at 300 Mbps, check the settings of your wireless client device.

## Other Tips

---

### **Issue:**

I reset my wireless router to factory settings and forgot how to log in.

### **Answer:**

Open your browser, enter 192.168.11.1 as the browser address, then press the Enter key. You will be prompted to log in. Enter "admin" for the username and "password" for the password. Click [OK] to log in. The option to reset your password will be available on the first page.

### **Issue:**

How do I forward ports on my wireless router for my gaming console?

### **Answer:**

Log in to the router. From the home page, go to the Internet Game/ Port Mapping section. Enter the port that needs to be forwarded and the IP address of the gaming console.

### **Issue:**

How do I enable or modify encryption settings on the wireless router?

### **Answer:**

Log in to the wireless router with your browser. Go to the Wireless Config tab and then select the Basic tab. Buffalo recommends the use of WPA/WPA2 mixed for wireless encryption. The passphrase/ key should be at least 8 characters in length.

### **Issue:**

How do I change my wireless router's broadcasted network name (SSID)?

### **Answer:**

Log in to the wireless router with your browser. Navigate to Wireless Config - Basic. Find the SSID setting. Select [Use] and enter the new name for your network. Click [Apply]. Once the wireless router has rebooted, you will need reconnect any wireless clients to the AirStation using the new network name. The encryption key will still be the same.

**Issue:**

What can I do if my wireless connection drops randomly or seems slow?

**Answer:**

There are many environmental factors that may affect this behavior. First, ensure the issue is not range related by locating the wireless router and the device dropping connection in closer proximity and check whether the connection drops continue.

In some cases, interference from other wireless networks or sources such as 2.4 GHz wireless phones may impact performance. To work around this scenario, change the wireless channel used by your wireless router.

Log in to the wireless router with your browser. Click on the Wireless Config tab and then the Basic tab. The Wireless Channel setting can be selected from channels 1 to 11. If an Auto-Channel option is available, attempt to use this option to remedy the problem. If Auto-Channel is unavailable, manually select an alternate channel and click [Apply].

**Issue:**

Though I am able to successfully make a connection with my wireless router, I am unable to access the Internet with my web browser.

**Answer:**

First, power off the Cable or DSL modem, the wireless router, and your computer. Move the router's mode switch to the on position. Verify that the modem is connected to the wireless router with an Ethernet cable to the Internet port. Power on the modem and wait one minute. Power on the wireless router and wait another minute. Power on the computer. Open a browser on the computer and navigate to a familiar website to verify whether the Internet connection is functioning normally. If after these steps, an Internet connection is still unavailable, power off the Cable or DSL modem and computer again and directly connect your computer to the Cable or DSL modem with a cable between the computer and the port on the modem. Power on the modem and wait one minute. Power on the computer and again check for an Internet connection.

If an Internet connection IS NOT available with a direct connection to the computer, please call the Internet Service Provider who installed the modem.

If an Internet connection IS available with a direct connection to the computer, please call our customer support.

**Issue:**

Where can I download the latest drivers, firmware, and instructions for my Buffalo wireless products?

**Answer:**

The latest drivers and firmware are available online at  
***[www.buffalotech.com](http://www.buffalotech.com)***

# Appendix A - Specifications

Wireless LAN Interface	
Standard Compliance	IEEE802.11b / IEEE802.11g / IEEE802.11n
Transmission Method	Direct Sequence Spread Spectrum (DSSS), OFDM, MIMO
Frequency Range	2,412 - 2,462 MHz (Channels 1 - 11)
Transmission Rate	802.11b: 11, 5.5, 2, 1 Mbps 802.11g: 54, 48, 36, 24, 18, 12, 9, 6 Mbps 802.11n 20 MHz BW (Long GI) 130, 117, 104, 78, 52, 39, 26, 13 Mbps (2 stream) 65, 58.5, 52, 39, 26, 19.5, 13, 6.5 Mbps (1 stream) (Short GI) 144.4, 130, 115.6, 86.7, 57.8, 43.3, 28.8, 14.4 Mbps (2 stream) 72.2, 65, 57.8, 43.3, 28.9, 21.7, 14.4, 7.2 Mbps (1 stream) 40 MHz BW (Long GI) 270, 243, 216, 162, 108, 81, 54, 27 Mbps (2 stream) 144.5, 121.5, 108, 81, 54, 40.5, 27, 13.5 Mbps (1 stream) (Short GI) 300, 270, 240, 180, 120, 90, 60, 30 Mbps (2 stream) 150, 135, 120, 90, 60, 45, 30, 15 Mbps (1 stream)
Access Mode	Infrastructure Mode
Security	AOSS, WPA2-PSK (AES), WPA/WPA2 mixed PSK, WPA-PSK (AES), 128-bit or 64-bit WEP, Mac Address Filter
Wired LAN Interface	
Standard Compliance	IEEE802.3u (100BASE-TX), IEEE802.3 (10BASE-T)
Transmission Rate	10 / 100 Mbps
Transmission Encoding	100BASE-TX 4B5B/MLT-3, 10BASE-T Manchester Coding
Access Method	CSMA/CD
Speed and Flow Control	10/100, Auto Sensing, Auto MDIX
Number of LAN Ports	4
LAN Port Connector	RJ-45

Other	
Power Supply	External AC 100-240V Universal, 50/60 Hz
Power Consumption	Approx. 5.8 W (Max)
Dimensions	WCR-G300 : 120 mm x 105 mm x 22 mm (4.7 x 4.1 x 0.9 in.) WCR-HP-G300 : 120 mm x 105 mm x 22 mm (4.7 x 4.1 x 0.9 in.)
Weight	WCR-G300 : 176 g (6.2 oz.) WCR-HP-G300 : 208 g (7.3 oz.)
Operating Environment	0 - 40° C (32 - 104° F), 20 - 80% (non-condensing)

# Appendix B - Default Configuration Settings

Feature	Parameter	Default Setting
Internet Router Mode only	Method of Acquiring IP Address	Easy Setup (Internet Connection Wizard)
	Default Gateway	none
	Address of DNS Name Server	none
	Internet MAC Address	Use default MAC Address
	MTU Size of Internet Port	1500 Bytes
PPPoE Router Mode only	Name of Connection	none
	User Name	none
	Password	none
	Service Name	none
	PPPoE Static IP	Disabled
	PPPoE IP Address	none
	PPPoE DNS 1 PPPoE DNS 2	none
	Connection Type	Continuous Connection
	Automatic disconnection	Disconnect Condition When both incoming and outgoing traffic stops Disconnect Time 5 Minutes
	Authorization	Automatic Authorization
	MTU Size	1454 Bytes
	MRU size	1454 Bytes
	Keep Alive	Enabled
DDNS Router Mode only	Dynamic DNS Service	Disabled
	Current Dynamic DNS Information	none
LAN	LAN Side IP Address	Router Mode: 192.168.11.1 (255.255.255.0)  Bridge Mode 192.168.11.100 (255.255.255.0)
	DHCP Server Router Mode only	Enabled

Feature	Parameter	Default Setting
	DHCP IP Address Pool Router Mode only	192.168.11.2 for up to 64 addresses
	Lease Period Router Mode only	48 hours
	Default Gateway Router Mode only	AirStation's IP Address
	DNS Servers Router Mode only	AirStation's IP Address
	WINZ Server Router Mode only	Assigned IP address
	Domain Name Router Mode only	Assigned Domain Name
	Default Gateway Bridge Mode only	none
	DNS Server Address Bridge Mode only	none
DHCP Lease Router Mode only	Current DHCP Client Information	none
NAT Router Mode only	Address Translation	Enabled
	Log Output of Deleted Packets	Disabled
Route	Routing Information	none
WPS	WPS	Enabled
	External Registrar	Enabled
	AirStation PIN	An 8-digit random value (Printed on the Admin Card)
	WPS Security Information	WPS status:      unconfigured
AOSS	Encryption Type of Exclusive SSID for WEP	none
	Dedicated WEP SSID isolation	Disabled
	AOSS Button on the AirStation Unit	Enabled

Feature	Parameter	Default Setting		
Basic	Wireless Radio	Enabled		
	Wireless Channel	Auto Channel		
	300 Mbps Mode	Band Width: 20MHz Extension Channel: -		
	Broadcast SSID	Allow		
	Separate feature	not used		
	SSID	SSID1: SSID based on MAC address SSID2: SSID based on MAC address + [-1] SSID3: not used		
	Authentication	No authentication		
	Encryption	No encryption		
	Rekey interval	60 minutes		
Advanced	Multicast Rate	1Mbps		
	DTIM Period	1		
	Privacy Separator	Disabled		
WMM	WMM-EDCA Parameters (Priority AC_BK (Low) )		For AP	For STA

	Syslog Server	none
	Transfer Logs	Router Mode: Address Translation, IP Filter, Firewall, PPPoE Client, Dynamic DNS, DHCP Client, DHCP Server, AOSS, Wireless Client, Authentication, Setting Changes, System Boot, NTP Client, and Wired Link  Bridge Mode: IP Filter, DHCP Client, AOSS, Wireless Client, Authentication, Setting Changes, System Boot, NTP Client, and Wired Link

# Appendix C - Checking Wireless Signal Quality

For users of Windows 7, Vista, or Mac OS X (10.4 and later), software supplied with the AirStation can be used to check the quality and strength of the wireless signal.

## Windows 7/Vista

Note:

- If the Client Manager V is not installed yet, download it from the Buffalo web site, and install it.
- Client Manager V does not support Windows XP.

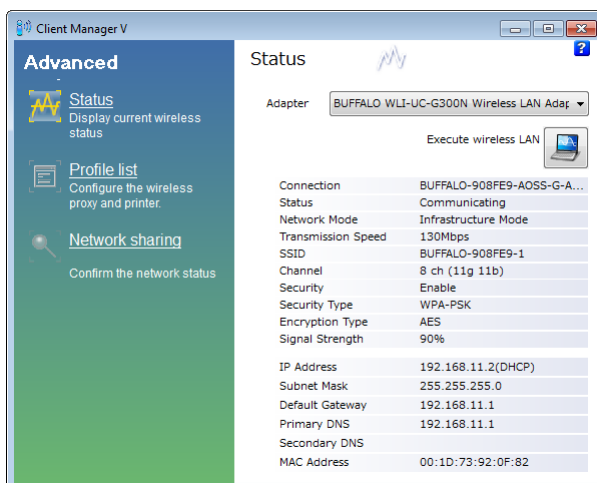

**1** Click [Start] > [All Programs] > [BUFFALO] > [AirStation Utility] > [Client Manager V].

**2**

Click [Advanced Setup].

**3**

When the Client Manager V status screen is displayed, click  .

4

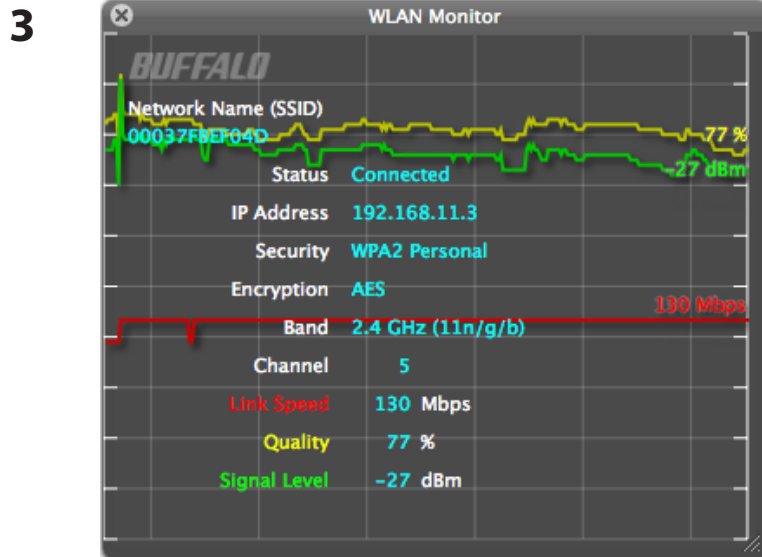

Parameter	Meaning
Connection status	Signal strength (dBm), link speed (Mbps), and signal quality (%) are displayed in one-minute intervals on a real-time graph.
Usage status by channel	The 11b/11g display shows usage in the 2.4 GHz band channels 1 to 11.

Colors are used to indicate the signal strength of the access point. Colors closer to red indicate an access point with a stronger signal strength, and colors closer to blue indicate an access point with a weaker signal strength.

# Mac OS X

- 1 Run the WLAN Monitor program that was downloaded from the Buffalo web site.

- 2 The software license screen is displayed when starting for the first time only. Click [Agree] to proceed.

Parameter	Meaning
Network name (SSID)	This displays the SSID of the AirStation that is currently connected.
Status	This indicates the current connection status.
IP Address	This indicates the IP address of the current wireless network port (Wi-Fi).
Security	This indicates the authentication method for the current connection target.
Encryption	This displays the encryption type for the current connection target.
Band	This displays the wireless band for the current connection target.
Channel	This displays the wireless channel for the current connection target.
Link Speed (Mbps)	This displays the current link speed.
Quality (%)	This displays the current signal quality.
Signal Level (dBm)	This indicates the strength of the current signal.

# Appendix D - TCP/IP Settings

## Windows 7

---

To configure TCP/IP in Windows 7, follow the procedure below.

- 1** Click [Start] > [Control Panel] > [Network and Internet].
- 2** Double-click [Network and Sharing Center].
- 3** Click [Change Adapter Settings] on the left side menu.
- 4** Right-click on [Local Area Connection], then click [Properties].
- 5** If the message “Windows needs your permission to continue” appears, click [Continue].
- 6** Select [Internet Protocol Version 4 (TCP/IPv4)] then click [Properties].
- 7** To have DHCP set your IP address settings automatically, check [Obtain an IP address automatically] and [Obtain DNS server address automatically].

To set your IP address settings manually, enter values for each settings. Example:

If the router's IP address is 192.168.11.1,	
IP address	192.168.11.80
Subnet mask	255.255.255.0
Default gateway	192.168.11.1
Preferred DNS server	192.168.11.1
Alternate DNS server	blank

- 8** Click [OK].

## Windows Vista

---

To configure TCP/IP in Windows Vista, follow the procedure below.

- 1** Click [Start] > [Settings] > [Control Panel].
- 2** Double-click [Network and Sharing Center].
- 3** Click [Manage network connections] on the left side menu.
- 4** Right click on [Local Area Connection], then click [Properties].
- 5** When the message [Windows needs your permission to continue], click [Continue].
- 6** Select [Internet Protocol Version 4 (TCP/IPv4)], then click [Properties].
- 7** To have DHCP set your IP address settings automatically, check [Obtain an IP address automatically] and [Obtain DNS server address automatically].

To set your IP address settings manually, enter values for each settings. Example:

If the router's IP address is 192.168.11.1,	
IP address	192.168.11.80
Subnet mask	255.255.255.0
Default gateway	192.168.11.1
Preferred DNS server	192.168.11.1
Alternate DNS server	blank

- 8** Click [Close].

## Windows XP

---

To configure TCP/IP in Windows XP, follow the procedure below.

- 1** Click [Start] > [Settings] > [Control Panel].
- 2** Double-click [Network].
- 3** Right click on [Local Area Connection], then click [Properties].
- 4** Select [Internet Protocol (TCP/IP)], then click [Properties].
- 5** To have DHCP set your IP address settings automatically, check [Obtain an IP address automatically] and [Obtain DNS server address automatically].

To set your IP address settings manually, enter values for each setting. Example:.

If the router's IP address is 192.168.11.1,	
IP address	192.168.11.80
Subnet mask	255.255.255.0
Default gateway	192.168.11.1
Preferred DNS server	192.168.11.1
Alternate DNS server	blank

- 6** Click [Close].

## Mac OS X

---

To configure TCP/IP in Mac OS X, follow the procedure below.

- 1** Click [Apple menu] > [System Preferences...].
- 2** Click [Network].
- 3** Click [Ethernet].
- 4** To have DHCP set your IP address settings automatically, select [Using DHCP] in the Configure IPv4 field.

To set your IP address settings manually, select [Manually] in the Configure IPv4 field and enter values for each setting. Examples:

If the router's IP address is 192.168.11.1,	
IP Address	192.168.11.80
Subnet Mask	255.255.255.0
Router	192.168.11.1
DNS Server	192.168.11.1
Search Domains	blank

- 5** Click [Apply].

## Appendix E - Restoring the Default Configuration

Hold down this button for 3 seconds. The AirStation will be initialized.

# Appendix F - Regulatory Compliance Information

## Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

## FCC Caution:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

## Important Note - FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The availability of some specific channels and/or operational frequency bands are country dependent and are firmware programmed at the factory to match the intended destination. The firmware setting is not accessible by the end user.

## **Industry Canada statement: Industrie Canada déclaration:**

This Class B digital apparatus complies with Canadian ICES-003.

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Ce dispositif est conforme à la norme CNR-210 d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes:

- (1) le dispositif ne doit pas produire de brouillage préjudiciable, et
- (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

## **Important Note - Radiation Exposure Statement: Note Importante - Déclaration d'exposition aux radiations:**

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

This device has been designed to operate with an antenna having a maximum gain of [5] dB. Antenna having a higher gain is strictly prohibited per regulations of Industry Canada. The required antenna impedance is 50 ohms.

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

Ce dispositif a été conçu pour fonctionner avec une antenne ayant un gain maximal de dB [5]. Une antenne à gain plus élevé est strictement interdite par les règlements d'Industrie Canada. L'impédance d'antenne requise est de 50 ohms.

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope

rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

## Europe – EU Declaration of Conformity

This device complies with the essential requirements of the R&TTE Directive 1999/5/EC. The following test methods have been applied in order to prove presumption of conformity with the essential requirements of the R&TTE Directive 1999/5/EC:

EN60950-1: 2006 +A11: 2009

Safety of Information Technology Equipment

EN50385 : (2002-08)

Product standard to demonstrate the compliance of radio base stations and fixed terminal stations for wireless telecommunication systems with the basic restrictions or the reference levels related to human exposure to radio frequency electromagnetic fields (110MHz - 40 GHz) - General public

EN 300 328 V1.7.1: (2006-10)

Electromagnetic compatibility and Radio spectrum Matters (ERM); Wideband Transmission systems; Data transmission equipment operating in the 2,4 GHz ISM band and using spread spectrum modulation techniques; Harmonized EN covering essential requirements under article 3.2 of the R&TTE Directive

EN 301 489-1 V1.8.1: (2008-04)

Electromagnetic compatibility and Radio Spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements

EN 301 489-17 V2.1.1 (2009-05)

Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment; Part 17: Specific conditions for Broadband Data Transmission Systems

This device is a 2.4 GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries, except in France and Italy where restrictive use applies.

In Italy the end-user should apply for a license at the national spectrum authorities in order to obtain authorization to use the device for setting up outdoor radio links and/or for supplying public access to telecommunications and/or network services.

This device may not be used for setting up outdoor radio links in France and in some areas the RF output power may be limited to 10 mW EIRP in the frequency range of 2454 – 2483.5 MHz. For detailed information the end-user should contact the national spectrum authority in France.

Česky [Czech]

Buffalo Technology Inc. tímto prohlašuje, že tento AirStation WCR-G300 / WCR-HP-G300 je ve shodě se základními požadavky a dalšími příslušnými ustanoveními směrnice 1999/5/ES.

Dansk [Danish]

Undertegnede Buffalo Technology Inc. erklærer herved, at følgende udstyr AirStation WCR-G300 / WCR-HP-G300 overholder de væsentlige krav og øvrige relevante krav i direktiv 1999/5/EF.

Deutsch [German]

Hiermit erklärt Buffalo Technology Inc. dass sich das Gerät AirStation WCR-G300 / WCR-HP-G300 in Übereinstimmung mit den grundlegenden Anforderungen und den übrigen einschlägigen Bestimmungen der Richtlinie 1999/5/EG befindet.

Eesti [Estonian]

Käesolevaga kinnitab Buffalo Technology Inc. seadme AirStation WCR-G300 / WCR-HP-G300 vastavust direktiivi 1999/5/EÜ põhinõuetele ja nimetatud direktiivist tulenevatele teistele asjakohastele sätetele.

English

Hereby, Buffalo Technology Inc. declares that this AirStation WCR-G300 / WCR-HP-G300 is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

Español [Spanish]

Por medio de la presente Buffalo Technology Inc. declara que el AirStation WCR-G300 / WCR-HP-G300 cumple con los requisitos esenciales y cualesquiera otras disposiciones aplicables o exigibles de la Directiva 1999/5/CE.

Ελληνική [Greek]

ΜΕ ΤΗΝ ΠΑΡΟΥΣΑ Buffalo Technology Inc. ΔΗΛΩΝΕΙ ΟΤΙ AirStation WCR-G300 / WCR-HP-G300 ΣΥΜΜΟΡΦΩΝΕΤΑΙ ΠΡΟΣ ΤΙΣ ΟΥΣΙΩΔΕΙΣ ΑΠΑΙΤΗΣΕΙΣ ΚΑΙ ΤΙΣ ΛΟΙΠΕΣ ΣΧΕΤΙΚΕΣ ΔΙΑΤΑΞΕΙΣ ΤΗΣ ΟΔΗΓΙΑΣ 1999/5/EK.

Français [French]

Par la présente Buffalo Technology Inc. déclare que l'appareil AirStation WCR-G300 / WCR-HP-G300 est conforme aux exigences essentielles et aux autres dispositions pertinentes de la directive 1999/5/CE.

Italiano [Italian]

Con la presente Buffalo Technology Inc. dichiara che questo AirStation WCR-G300 / WCR-HP-G300 è conforme ai requisiti essenziali ed alle altre disposizioni pertinenti stabilite dalla direttiva 1999/5/CE.

Latviski [Latvian]

Ar šo Buffalo Technology Inc. deklarē, ka AirStation WCR-G300 / WCR-HP-G300 atbilst Direktīvas 1999/5/EK būtiskajām prasībām un citiem ar to saistītajiem noteikumiem.

Lietuvių [Lithuanian]

Šiuo Buffalo Technology Inc. deklaruoją, kad šis AirStation WCR-G300 / WCR-HP-G300 atitinka esminius reikalavimus ir kitas 1999/5/EB Direktyvos nuostatas.

Nederlands [Dutch]

Hierbij verklaart Buffalo Technology Inc. dat het toestel AirStation WCR-G300 / WCR-HP-G300 in overeenstemming is met de essentiële eisen en de andere relevante bepalingen van richtlijn 1999/5/EG.

Malti[ Maltese]

Hawnhekk, Buffalo Technology Inc. , jiddikjara li dan AirStation WCR-G300 / WCR-HP-G300 jikkonforma mal-htigijiet essenzjali u ma provvedimenti oħrajn rilevanti li hemm fid-Dirrettiva 1999/5/EC.

Magyar [Hungarian]

Alulírott, Buffalo Technology Inc. nyilatkozom, hogy a AirStation WCR-G300 / WCR-HP-G300 megfelel a vonatkozó alapvető követelményeknek és az 1999/5/EC irányelv egyéb előírásainak.

Polski [Polish]

Niniejszym Buffalo Technology Inc. oświadcza, że AirStation WCR-G300 / WCR-HP-G300 jest zgodny z zasadniczymi wymogami oraz pozostałymi stosownymi postanowieniami Dyrektywy 1999/5/EC.

Português [Portuguese]

Buffalo Technology Inc. declara que este AirStation WCR-G300 / WCR-HP-G300 está conforme com os requisitos essenciais e outras disposições da Directiva 1999/5/CE.

Slovensko [Slovenian]

Buffalo Technology Inc. izjavlja, da je ta AirStation WCR-G300 / WCR-HP-G300 v skladu z bistvenimi zahtevami in ostalimi relevantnimi določili direktive 1999/5/ES.

Slovensky [Slovak]

Buffalo Technology Inc. týmto vyhlasuje, že AirStation WCR-G300 / WCR-HP-G300 spĺňa základné požiadavky a všetky príslušné ustanovenia Smernice 1999/5/ES.

Suomi [Finnish]

Buffalo Technology Inc. vakuuttaa täten että AirStation WCR-G300 / WCR-HP-G300 tyyppinen laite on direktiivin 1999/5/EY oleellisten vaatimusten ja sitä koskevien direktiivin muiden ehtojen mukainen.

Svensk [Swedish]

Härmed intygar Buffalo Technology Inc. att denna AirStation WCR-G300 / WCR-HP-G300 står i överensstämmelse med de väsentliga egenskapskrav och övriga relevanta bestämmelser som framgår av direktiv 1999/5/EG.

## Safety

This equipment is designed with the utmost care for the safety of those who install and use it. However, special attention must be paid to the dangers of electric shock and static electricity when working with electrical equipment. All guidelines of this manual and of the computer manufacturer must therefore be allowed at all times to ensure the safe use of the equipment.

## 根據 NCC 低功率電波輻射性電機管制辦法：

### 第十二條：

經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。

### 第十四條：

低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信法規定作業之無線電通信。低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

해당 무선설비는 전파혼신 가능성이 있으므로 인명안전과 관련된 서비스는 할 수 없음

기종별	사 용 자 안 내 문

# Appendix G - Environmental Information

- The equipment that you have purchased has required the extraction and use of natural resources for its production.
- The equipment may contain hazardous substances that could impact health and the environment.
- In order to avoid the dissemination of those substances in our environment and to diminish the pressure on the natural resources, we encourage you to use the appropriate take-back systems.
- The take-back systems will reuse or recycle most of the materials of your end life equipment in a sound way.
- The crossed-out wheeled bin symbol invites you to use those systems.

- If you need more information on the collection, reuse and recycling systems, please contact your local or regional waste administration.

# Appendix H - GPL Information

The source code for Buffalo products that use GPL code is available at <http://opensource.buffalo.jp/> .
